EDUCATION

Massachusetts Institute of Technology

Master of Science in Technology and Policy

Cambridge, MA

Aug. 2025 – Expected May 2027

Macalester College

Bachelor of Arts in Computer Science, Political Science

Saint Paul, MN

Aug. 2020 – May 2024

EXPERIENCE

AI Research Intern

MIT-IBM Computing Research Lab

June 2026 – Aug 2026

Cambridge, MA

- Developed ANCHOROPT, a model- and harness-agnostic framework repairing agent failures via counterfactual policy improvement, enabling smaller models to match larger-model reliability
- Built a pipeline mining dominant and residual failures and evaluating candidate policy fixes (e.g., reprompting, rerouting) via controlled counterfactual replay and iterative learning
- Implemented a robust training pipeline accepting fixes only when causally effective, harm-free, and net beneficial
- Evaluated on memory-intensive and multi-turn tool-use tasks (BFCL, τ -bench), improving Granite-4.1-8B accuracy by over 25% on memory tasks and 8–10% on multi-turn tasks
- Collaborated with mentors and teammates, proactively reached out to researchers across IBM to advance the research project; now co-authoring a paper on the work

Graduate Fellow

Technology and Policy Program and Decentralized Internet Group, CSAIL

Oct. 2025 – Dec. 2025

Cambridge, MA

- Researched Differential Privacy methods to mitigate prompt leakage and data memorization in chatbots
- Collaborated with Principal Research Scientist Lalana Kagal to build a privacy-evaluation chatbot prototype

Software Engineering Intern

Uber Technologies Inc.

May 2023 – Aug. 2023

San Francisco, CA

- Redesigning a legacy audience tracking service by decoupling it from the main API and replacing continuous queries with scheduled batch updates, cutting annual service costs from \$40K USD to \$4.5K USD
- Built gRPC endpoints and Kafka streaming pipelines to ingest and store audience data, replacing REST endpoints and enabling efficient cron jobs for Uber's CRM workflows
- Optimized delta computation algorithm using advanced hashing and batching, scaling audience calculations from 150M to 1B records without memory overload
- Applied Test-Driven Development and shadow rollout with JUnit and Mockito, validating 95% real-time data consistency with 10x less computation

TECHNICAL SKILLS

Related Coursework: Deep Learning, Ethical ML, Data Structures & Algorithms, Linear Algebra, DBMS

Technical Languages: Python, Java, SQL, JavaScript, C++, R, Swift, HTML/CSS

Frameworks: React, JUnit, Spring MVC

Developer Tools: Git, CI/CD, REST API, gRPC, Apache Kafka, Cadence, Grafana, AWS, uDeploy (Jenkins)

Libraries: PyTorch, Pandas, NumPy, Matplotlib, Sci-Kit Learn, ggplot, Maven, Log4j, Mockito

Languages: Tibetan (Native), English (Professional), Hindi (Conversational)

ACHIEVEMENTS & LEADERSHIP

Vice Chancellor's Inclusive Excellence Fellowship | MIT

Sept. 2025 – May 2026

Summa Cum Laude | Macalester College

May 2024

GTPN Hackathon | 2nd Place

Aug. 2023

Sontsa Initiative Mentorship | Founding Co-Director

May 2020 – May 2023

Horizon Foundation Scholar | United World College - USA

2018
